Front Access Riser Damper

Ruskin's new Front Access Riser Damper is the first of its kind. The FSD60FA combination fire and smoke damper is installed in a corridor or shaft vertical wall and provides full access to the actuator from the front of the unit. Separate access doors are not required saving on installation cost.

This innovative U.L. approved Class I damper is also mounted without retaining angles saving even more money than conventional designs. In addition, the FSD60FA can accommodate a wall mounted steel grille or register (with obd).

When our customers face tough applications like a corridor to shaft penetration, Ruskin provides innovative solutions...we make it happen for you! For more information on the FSD60FA and our complete line of dampers and louvers, contact your local Ruskin representative.

We Make it Happen!
