### Finishes and Color Guide

Factory finishes by RUSKIN are designed for low VOC emissions and eliminate the risk of VOC emissions found in louver finishes that are applied on site. All RUSKIN manufacturing facilities operate in full compliance with all applicable airpermitting regulations. All facilities maintain ISO 14001 Environmental Management Systems which include VOC emission reduction strategies including state of the art spray equipment and operator training.

| **2 Coat - 70% PVDF**<br><span>RUSKIN Superior Finish**: 2 Coat 70% PVDF paint finishes provide maximum resistance against color fade and chalking. This carbon/fluorine bond, unique to the resin, when coupled with the finest inorganic pigments, produces the most durable and long lasting finish in the industry. These finishes are resistant to most chemicals, acid rain, salt spray and general air pollution. RUSKIN offers a twenty-year warranty on these finishes in standard colors on standard extruded aluminum products. All standard colors meet or exceed AAMA 2605-17a.†<br><br>**Clear anodize preoxidizes the aluminum surface for uniform clear finish not easily affected by natural oxidizing influences. Improved metallic luster appearance is similar to mill finish. 204-R1 (Aluminum Association Code AA-C22A31) provides 0.4 mil (10μm) minimum surface depth treatment recommended for normal weather exposure. 215-R1 (Aluminum Association Code AA-C22A41) provides 0.7 mils (18μm) minimum surface depth recommended for severely corrosive and abrasive atmospheric exposure. Both finish types available only on aluminum.<br><br>**PEARLEDIZE 70 AND PEARLEDIZE 50**<br><span>RUSKIN’S High Pearlescent Finish**: Pearledize is a PVDF-based finish that utilizes pearlescent mica flakes to simulate the metallic appearance of anodized and metallic paint finishes.<br><br>**Pearledize 50 (50% PVDF)**:<br>Meets the AAMA 2604-17a† specification. A ten-year warranty is available on standard colors on standard extruded aluminum products.<br><br>**Pearledize 70 (70% PVDF)**: Pearledize 70 meets the AAMA 2605-17a† specification. A twenty-year warranty is available on standard colors on extruded aluminum products.<br><br>**COLOR ANODIZE**<br><span>Electrolytically deposited coating on aluminum**: The color anodize process specified in Aluminum Association Code AA-C22A44 electrolytically deposits inorganic color pigment finish to a 0.7 mil (18μm) minimum surface depth on sulfuric acid anodized aluminum. Treated aluminum is sealed to convert a freshly formed aluminum oxide finish to a corrosive resistant, inert condition. Available only on aluminum. Some shade variation may occur.<br><br>**CLEAR ANODIZE**<br><span>Clear oxide coating for aluminum**: Clear anodize preoxidizes the aluminum surface for uniform clear finish not easily affected by natural oxidizing influences. Improved metallic luster appearance is similar to mill finish. 204-R1 (Aluminum Association Code AA-C22A31) provides 0.4 mil (10μm) minimum surface depth treatment recommended for normal weather exposure. 215-R1 (Aluminum Association Code AA-C22A41) provides 0.7 mils (18μm) minimum surface depth recommended for severely corrosive and abrasive atmospheric exposure. Both finish types available only on aluminum.<br><br>**PRIME COAT**<br><span>Preparation for field painting**: Finish may be topcoated with epoxy, vinyl, urethane and other heavy-duty coatings within six months of applications. Prime coat contaminations always occurs before field painting and requires thorough field cleaning prior to painting.<br><br>**2 Coat - 50% PVDF**<br><span>RUSKIN’S High Performance Finish**: 2 Coat 50% PVDF finishes provide fluoropolymer benefits such as long color life and resistance to chalking and chemicals. For optimization of the price-benefit ratio, they are appropriate coatings for today’s non-monumental projects. Ten-year warranty for standard color on standard extruded aluminum products is also available for RUSKIN’S PVDF.<br><br>**FINISH IN THE INDUSTRY**: These finishes are resistant to most chemicals, acid rain, salt spray and general air pollution. RUSKIN’S PVDF finishes provide fluoropolymer benefits such as long color life and resistance to chalking and chemicals. For optimization of the price-benefit ratio, they are appropriate coatings for today’s non-monumental projects. Ten-year warranty for standard color on standard extruded aluminum products is also available for RUSKIN’S PVDF.<br><br>**Finish Specifications**: Before paint application, louvers shall be thoroughly cleaned and pretreated to assure maximum performance. PVDF finish shall be applied to provide 1.2 mils (30μm) factory applied, baked-on film in accordance with AAMA 2605-17a* "Voluntary Specification Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Architectural Extrusions and Panels". Color shall be RUSKIN (specify color name and number).<br><br>Louvers shall receive factory applied, baked-on 2 Coat 50% PVDF based color coating following thorough cleaning and pretreatment of metal. The finish shall be applied at 1.2 mils (30μm) total dry film thickness in accordance with AAMA 2604-17a†. Color shall be RUSKIN (specify color name and number).<br><br>Louvers shall receive prime coating following thorough cleaning and pretreatment of metal. Field topcoat with epoxy, vinyl, urethane or other heavy-duty coating within six months of application. Prime coat shall be a minimum of .3 ± .1 mils (8 ± 3μm) thick.<br><br>Louvers shall receive thorough cleaning and pretreatment as described above. Pearledize coating shall be applied and baked to achieve a hard durable finish in compliance with either AAMA 2605-17a* or AAMA 2604-17a† as selected and specified. Color shall be RUSKIN (specify color name and number).<br><br>Louvers shall receive anodized finish complying with Aluminum Association Code AA-C22A31. Finish is applied to 0.7 mils (18μm) minimum thickness onto chemically etched and pretreated aluminum. Color shall be RUSKIN (specify color name).<br><br>Louvers shall receive a 204-R1 clear anodize finish complying with Aluminum Association Code AA-C22A31. Finish is applied to chemically etched and pretreated aluminum to 0.4 mils (10μm) minimum surface depth by a 30 minute anodizing process. Louvers shall receive a 215-R1 clear anodize finish complying with Aluminum Association Code AA-C22A41. Finish is applied to chemically etched and pretreated aluminum to 0.7 mils (18μm) minimum surface depth by a 60 minute anodizing process.
